1. Executive Summary

The Eat2beNICE project, a European Union's Horizon 2020 research and innovation programme, aims to investigate the effects of nutrition and lifestyle on impulsive, compulsive, and externalizing behaviours.

We hereby report for deliverable D8.6: *Registration number of clinical studies in a WHO- or ICMJE-approved registry.*

2. Deliverable report

For all participating RCTs, we collected the latest versions of the applicable data collection protocol. Four clinical trials are to be performed in Eat2beNICE:

- RCT TRACE/Elimination study
- RCT Medicomp/Predimed-Plus
- RCT Probia
- RCT Vantastic

Final ethical approvals have been collected for three RCTs: the TRACE/Elimination study, the Probia trial and the Medicomp/Predimed-Plus study. For these three clinical trials, a registration number has been requested and issued. For Vantastic, we have submitted the required documentation for registration to clinicaltrials.org mid-February, and are expecting confirmation every day now.
